U.S. Patent and Trademark Office PTOL-303 (Rev. 08-06) Continuation of 11. does NOT place the application in condition for allowance because: Applicant argues that Smocha et al. does not teach determining a load monitoring condition used for the load monitoring of the computer system from the amount of load given to the computer, the results of measuring the response or throughput and the results of measuring the resource situation inside the computer system; however, Applicant's arguments are not well taken. Smocha teaches in column 8, In 13-28 that an analysis is performed on the computer system (i.e., determining a load monitoring condition) based upon the load imposed on a server (i.e., the amount of load given to the computer) (col 8, In 13-15). The load is measured based upon the server response time measurement (i.e., the results of measuring the response) (col 8, In 15-17). The claimed resource situation is the status of the computer system which can be indicated by the measurement of the response time and therefore is met by the previous citations. Therefore the claimed limitations are met by the cited references.
